SUNSET®

What It Is

What sets Sunset apart from other supplements is its unique blend of ingredients. Each ingredient is carefully selected and sourced to ensure a maximum effectiveness. The Vitamins and nutrients in Kyani Sunset are also easily absorbed by the body, so you can be sure you are getting the most out of each dose.

With Sunset, you can feel confident that you are helping to give to your body the nourishment it needs to thrive. Say hello to one convenient and powerful formula. Take control of your wellness and add Sunset to your daily routine today. Try it now and experience the difference for yourself!

How It Works

Sunset provides the form of Vitamin E with tocotrienols from Rice bran. In addition, Sunset also contains Vitamin A, which helps maintaining healthy skin, vision, and immune function. Vitamin D3, also known as the „Sunshine Vitamin,“ is important to help strong bones, optimal immune function and to improve mood and mental wellness. And let’s not forget about Omega 3, a powerhouse nutrient that supports heart health, brain function, and joint health.

Why You’ll Love It

Sunset is a proprietary combination of EPA and DHA derived from Wild Fish Oils (including Wild Salmon among other wild fish), Vitamin A, Vitamin E and the essential Vitamin D. Sunset features fish oil as source of Omega-3 (EPA and DHA), the powerful Vitamins A, D, and one of the major versions of Vitamin E, Tocotrienol - Tocopherol, from rice bran oil. Beta-Carotene counts to the group of greater carotenoids. Carotenoids are the most common natural pigments. They mainly appear in fruit and vegetables. Beta carotene belongs to the 50 carotenes with pro Vitamin A character, which means that the body can convert it into Vitamin A. The Beta Carotene in Sunset originates from the Dunaliella Salina algae, which can be found in hypersaline waters and that are red in colour. Dunaliella Salina is very variable in shape and can be distinguished from other kinds of the genus by its high amount of Beta Carotene – namely between 5 and 14 % of dry weight - in areas of intense light and salt concentrations.
